

Graduates In Arms (Continued)

Nothing is quite so sad as hearing a young person speak of being bored, and nothing as uplifting as reading about past grads like John Rymer thrilled to be alive, "exploring new things, running, swimming, going to the gym, rock and mountain climbing, training for a marathon."

Since joining the Navy he has been to four different colleges to receive training for his job as Aviation Electronics Technician working on F/A-18 jets.

John Rymer is snortin' fire; "Up before the sun and off to the summit, gonna be a good day." Then later, "Lying on the wing of an F/A -18 watching the stars."

Matt Haueter

For all four years in class, Matt was gung ho to join the Army and did everything but get a flag tattoo before enlisting. In December 2009, he graduated from his infantry training school where he learned "combat training and battlefield operations, use of weapons including anti-tank mines."

Matt was an outstanding student and contemplative thinker. He taught himself AutoCad drafting, built a running Stirling engine and was always asking good questions and studying issues.

On a skills contest overnight outing, we saw *No Country For Old Men*, and joked for months, if you ever find a bag of money leave it alone!
